

“focus on spindle repairs”, following the recent down turn in the global economy, the imminent future becomes a place of uncertainty, where companies fear parting with precious capital & slashed budgets.

Loadpoint Bearings have been a renowned world manufacturer and supplier of Air Spindles for 30 years. With this vast experience & the quantity of spindle repair enquiries we have received from Westwind customers, due to their “obsolescence programme”, we have focused more of our resources into expanding our existing repair facilities, to provide a lower cost solution to your Air Bearing demands.

These facilities have been successfully refined, to repair all variants of spindle from every supplier in the World to an ‘*as new*’ condition, or where uneconomical to repair, we can replace the majority of spindles with new.

A small range of manufacturers spindles which can be repaired or replaced are as follows.

Dicing

*Colibri
Disco
Kulicke and Soffa
Micro Automation
TSK
Yaskawa
Yewontech*

Painting

*ABB
Binks
Dürr
Fischer
GAT
